

SRI BRIEFING: RESEARCH ON PARANORMAL PHENOMENA

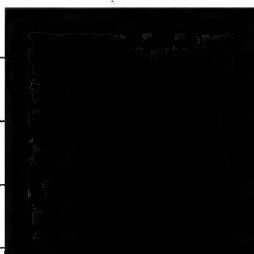

September 24, 1974

Harold Puthoff and Russell Targ

1. Introduction and description of early SRI experiments involving the perturbation of a superconducting magnetometer. Results indicate both psychokinetic and paranormal perceptual ability of the subject, Ingo Swann.
2. Techniques to enhance man/machine communication. Experiments with a four-state random stimulus generator used as an ESP teaching machine.
3. Remote viewing. Experimental evidence for direct perception of remote geographical locations.
4. Information transmission under conditions of sensory shielding. Picture-drawing experiments with Uri Geller.
5. Experimental factors related to paranormal perception in a uniform-sensory setting (ganzfeld procedure); film.
6. Arousal response in EEG with the presentation of remote stimuli.
7. Physics, entropy and psychokinesis, a summary of recent experiments.
8. Real time Kirlian video photography high-voltage corona discharge experiments.
